

Precise Dent Pulling System

The Pro Pull Complete utilizes the all new PR-3 Auto to generate the precise high power/low weld time needed to prevent damage to the corrosion protection on the backside of the panel. After a short delay, the PR-3 Auto Welder senses when a weld tip or pull key has made contact and welds automatically. The Pro Pull Complete has all the accessories you need to make the repair fast, no matter the size.

Auto Feature

The Auto feature is quick and user friendly due to the fact that it does not weld instantly like other higher priced systems on the market. The delay allows for repositioning and freedom in the application process.

No Burn Through

The PR-3 delivers the correct amount of power and weld time to the pull key, preventing burn through on the panel. This specific technology prevents rust and corrosion, as well as keeps repair & turn around time quick.

Advantages:

- Lower Cycle Times and Labor Costs
- Repair Dents vs. Replace Panels

PR-3 Auto
(230V)

System Includes:

- Pro Spot PR-3 Auto Welder
- Portable Cart with storage, tool racks, locking wheels and wrap around handle for mobility.
- Pro Pull
- Pull Bar
